

Navitha Nelluri

Software Engineer

San Bernardino, CA • [linkedin/Navitha](#) • (909) 721-4695 • nellurinavitha1999@gmail.com • [github.io](#)

SUMMARY

Software Engineer with 4+ years of experience building scalable, high-performance, and cloud-native applications using Python (FastAPI, Django, Flask) and modern JavaScript frameworks (React, Angular). Experienced in microservices architecture, REST/GraphQL APIs, and deploying applications on AWS using Docker and Kubernetes. Strong background in CI/CD, secure API development (JWT/OAuth2), and performance optimization. Proven ability to deliver reliable, production-grade solutions in Agile environments.

TECHNICAL SKILLS & TOOLS

Languages: Python, JavaScript (ES6+), TypeScript, Java, SQL, Bash/Shell Scripting

Frontend: React.js, Angular, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap, Component-Based Architecture, Responsive UI Development

Backend & APIs: FastAPI, Django, Flask, Node.js, RESTful APIs, GraphQL, WebSockets, Microservices Architecture, JSON

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLite, SQLAlchemy, Django ORM

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Microsoft Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Terraform, Ansible

CI/CD & Tools: Git, GitHub, GitHub Actions, GitLab CI, Jenkins, Bitbucket, Jira, Confluence

Testing & Quality: PyTest, Jest, Cypress, Mocha, Chai, Unit Testing, Integration Testing, TDD, Debugging, Code Reviews, PEP8, SonarQube

Security: JWT, OAuth2, HTTPS/TLS, API Security, Secure Coding Practices

Monitoring & Observability: ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Splunk, New Relic

Design & Other Tools: Figma, Adobe Creative Suite, Design Systems, UI Prototyping

Additional Exposure: Machine Learning Fundamentals, Scikit-learn, Web Security

EXPERIENCE

Dell Technologies

San Francisco, California

Full Stack Web Developer

Aug 2024 – Present

- Engineered scalable full-stack applications using FastAPI, Django, and React, improving overall system performance by 30% and supporting 10,000+ concurrent enterprise users across distributed, cloud-native environments.
- Designed and implemented a robust microservices architecture spanning 8+ services, increasing system scalability by 40%, improving fault isolation, and reducing inter-service dependency failures by 25%.
- Developed and optimized high-performance RESTful and GraphQL APIs, reducing average response times by 35% and significantly improving API throughput under high-load, production-level traffic conditions.
- Implemented WebSocket-based real-time communication features, enabling live data streaming and increasing user engagement metrics by 25% across interactive, customer-facing enterprise applications.
- Optimized backend performance using Redis caching, asynchronous processing, and advanced SQL query tuning techniques, consistently achieving response times below 200ms across high-traffic and data-intensive systems.
- Built and automated end-to-end CI/CD pipelines using GitHub Actions and Jenkins, reducing deployment time by 40%, minimizing manual errors by 30%, and improving release consistency across environments.
- Deployed and managed containerized applications using Docker and Kubernetes on AWS infrastructure, achieving 99.9% system uptime, improving scalability, and reducing overall infrastructure and operational costs by 20%.

Hexaware Technologies

Hyderabad, India

Python Full Stack Developer

Nov 2020 – Dec 2022

- Developed scalable full-stack applications using Django, Flask, and React, improving overall system performance by 25% and enhancing responsiveness across multiple enterprise client-facing platforms and internal business applications.
- Built and maintained robust RESTful APIs supporting 10+ third-party integrations, enabling seamless communication between payment systems, CRM tools, and external enterprise services across distributed application environments.
- Designed and implemented responsive and dynamic UI components using React and Angular frameworks, improving user experience, accessibility, and frontend performance efficiency by 20% across multiple web applications.
- Optimized PostgreSQL and MySQL database performance through advanced query tuning and indexing strategies, reducing execution time by 20% and improving data retrieval efficiency in high-volume transactional systems.
- Migrated legacy monolithic systems to a microservices-based architecture using Flask and Docker, increasing deployment frequency by 35%, improving scalability, and enabling independent service-level deployments.
- Automated CI/CD pipelines using Jenkins, Git, and Docker, reducing release cycle time by 40%, improving deployment consistency, and minimizing manual intervention across development, staging, and production environments.
- Improved system reliability by diagnosing and resolving critical production issues using logging and debugging tools, reducing downtime by 20% and enhancing SLA compliance across multiple client delivery projects.

CitiusTech

Hyderabad, India

Python Developer

Jun 2019 – Oct 2020

- Developed backend services using Python and Flask for healthcare applications, processing over 500,000+ patient records and supporting large-scale clinical data workflows across enterprise healthcare systems.
- Built and deployed RESTful APIs across 6+ integrated systems, enabling real-time data exchange between healthcare platforms and significantly improving interoperability across clinical and operational enterprise environments.
- Optimized API performance using advanced query tuning and caching strategies, improving response times by 20% and enhancing system efficiency in high-traffic production healthcare applications.
- Wrote and optimized complex SQL queries for datasets exceeding 1M+ records, improving reporting efficiency, reducing query execution time by 25%, and supporting critical analytics and compliance reporting workflows.
- Integrated 4+ third-party healthcare APIs, ensuring seamless connectivity with insurance systems, pharmacy services, and clinical data providers across distributed enterprise environments.
- Diagnosed and resolved production issues using structured logging and debugging tools, reducing system downtime by 20% and improving overall application stability and reliability.
- Maintained high code quality standards by following PEP8 guidelines, implementing unit testing, and participating in code reviews, improving team productivity and reducing defect rates by 15%.

EDUCATION

California State University, San Bernardino | **M.S. in Computer Science**
Malla Reddy Engineering College for Women, India | **Bachelor's Degree in Electronics and Communication Engineering** Jul 2017 – Jul 2021

Jan 2023 – Dec 2024

Certificate

- **Python (Gold Badge)** – HackerRank | Core Python, OOP, Data Structures, Algorithms
- **SQL (Gold Badge)** – HackerRank | Advanced SQL, Joins, CTEs, Window Functions
- **Software Engineering Certificate** | SOLID Principles, System Design Basics, Git, Testing
- **React Certificate** | JSX, Hooks, Routing, Component-Based Development

Projects

Full Stack E-commerce Platform (Forever)

GitHub: <https://github.com/NavithaNelluri/forever-full-stack>

- Built a full-stack e-commerce platform enabling product browsing, cart management, and order processing for 500+ simulated users with secure JWT authentication.
- Optimized frontend performance and API calls, reducing page load time by 25% across dynamic product listing and checkout flows.

Social Media Application (SocialBook)

GitHub: <https://github.com/NavithaNelluri/SocialBook>

- Built a scalable social media platform with post creation, likes, and real-time feed interactions, improving UI responsiveness by 20%.
- Integrated REST APIs for user data handling, reducing API response delays by 15% across user feed and profile modules.

YouTube Clone (React)

GitHub: <https://github.com/NavithaNelluri/youtube-clone-react>

- Developed a YouTube-like video streaming platform using React, enabling video search, playback, and dynamic content rendering with API integration.
- Implemented responsive UI and reusable components, improving page load performance by 25% and enhancing cross-device compatibility.
- Integrated external APIs for fetching video data, improving content loading efficiency and reducing API response latency by 20%.

LinkedIn Clone Application

GitHub: <https://github.com/NavithaNelluri/linkedin>

- Built a LinkedIn-inspired professional networking platform with user authentication, profile management, and post-sharing features using modern frontend technologies.
- Improved user interaction flow and UI responsiveness by 20% through optimized component rendering and state handling techniques.
- Implemented secure authentication mechanisms, enhancing user data protection and reducing session-related issues by 25%.

Machine Learning Project – Loan Approval Prediction

GitHub: <https://github.com/NavithaNelluri/ML-Projects/tree/main/LoanApprovalPrediction>

- Built an ML model to predict loan approvals using feature engineering and preprocessing, reducing prediction errors by 15%.
- Evaluated multiple algorithms and optimized model parameters, enhancing decision-making accuracy for financial data analysis scenarios.
